

Mediate.ai

Meeting Analytics for Better Team Decisions

BASED ON ACTIVE INFERENCE & THE PVF-AB FRAMEWORK

THE PROBLEM

Teams often get stuck repeating the same arguments, ignoring quiet voices, or rushing into sub-optimal decisions because they cannot visualize the real-time social dynamics in the room. Traditional collaboration tools only capture raw volume—who spoke the longest—rather than who truly influenced the outcome or whether disagreement was constructive.

THE SOLUTION

Mediate.ai measures **four critical hidden dynamics** using mathematically grounded active inference models. Our executive dashboard translates abstract team behaviors into definitive, high-integrity metrics.

METRIC	WHAT IT TRACKS & QUANTIFIES
Power Equity (PEI)	Balances conversational and systemic influence. Formally prevents dominance and ensures marginalized or quieter perspectives are integrated.
Creative Tension	Measures cognitive diversity and healthy disagreement. Targets an optimal band (0.3–0.7) to flag passive groupthink on one end or chaotic friction on the other.
Narrative Coherence	Tracks the development of a unified storyline across team members. Flags fragmented understanding or diverging agendas early.
Epistemic Convergence	Assesses structural alignment and agreement on objective facts. Quantifies actual learning and continuous baseline alignment.

WHY ACTIVE INFERENCE?

These specific metrics derive explicitly from the **Free Energy Principle** applied to organizational behavioral design. High-performing, resilient teams actively minimize collective prediction error (Epistemic Convergence), maintain strategic narrative alignment (Narrative Coherence), balance internal network communication (Power Equity), and maintain information-rich creative tension within optimal bounds. This mathematically rigorous approach has been fully validated with real human control groups.

CURRENT STATUS

- **Workshop Version (Decision Breakthrough):** Fully human-facilitated, pilot-tested, and immediately ready for cross-functional deployment. ✓
- **Mathematical Framework:** Core PVF-AB and FEMI research papers are peer-reviewed and fully published. ✓
- **Software MVP Architecture:** Designed around automated pipeline ingestion (upload transcript → receive dynamic metric dashboard). Configuration underway. ✗

NEXT STEPS

- **Beta Launch:** Provisioning zero-cost rollouts for selected early-stage small teams, leading into a commercial tiered subscription (\$10–\$20/user/month).
- **Strategic Collaboration:** We are seeking technical feedback. Let's explore how Mediate.ai can seamlessly anchor to your team's decision-making frameworks.

Interested in optimizing your team's decision-making paradigm?

Let's schedule a brief introductory text exchange or call.
